

To Jim Mallam: please forward to Franchises if you feel you they may be interested:

We had the BeerBlast – *Mixed Gas Dispense System* installed to cost effectively provide the correct blend of CO₂/N₂ for our draft beer system. The BeerBlast, manufactured by South-Tek Systems, is compact and has an integral McDantim gas blender and a nitrogen generator. The BeerBlast was mounted on the wall, out of the way, back near our cooler and has been operating perfectly.

Since the BeerBlast was installed, our beer pour has improved significantly; we no longer have beer overfoaming at the tap, the beer does not go flat toward the end of the keg, we get the correct head on each pour, we drain each keg completely, and the customers are truly satisfied with the quality of the draft beer. Also, our employees no longer have to deal with changing over beergas cylinders nor do we worry about running out of the beergas.

As a result, our draft beer sales have improved dramatically, and so have our profits. We are extremely pleased with BeerBlast and we highly recommend it!

A handwritten signature in black ink, appearing to read "Stew Smith". The signature is fluid and cursive, with a long horizontal line extending to the right.
