

# DeOx™ | Corrosion Solutions for Wet Fire Protection Systems

CHOOSE YOUR LEVEL OF CORROSION PROTECTION

## Level 1

- One O<sub>2</sub>-Release System recommended per high point of piping network to eliminate corrosive air-water interface at point of installation.
- Baseline corrosion protection.

## Level 2

- O<sub>2</sub>-Release Systems required - one recommended per high point of piping network.
- N<sub>2</sub>-Inert System eliminates corrosive air-water interface at trapped air pockets that may still exist in undetected areas.
- Proactive corrosion defense.

## Level 3

- Reduces fill water dissolved oxygen content to level where corrosion is inhibited.
- Eliminates bacteria in fill water
- Inhibits corrosive air-water interface throughout entire piping network.
- The ultimate in corrosion protection.
